Fabricio Tramontano Pirini

Senior Frontend Engineer

Brazil (UTC -3)

fabricio@fabriciopirini.com fabriciopirini.com fabriciopirini fabriciopirini

Senior Frontend Engineer building fintech products for web and mobile, building since 2017. Building a pre-launch US consumer fintech's Expo and React Native app for iOS, Android, and web, plus its Next.js admin, from the first commit. At Kraken (2024–2026), owned the design system and shipped a React Native support portal across 3 mobile apps.

Technical Skills

Languages & Runtimes: TypeScript, JavaScript (ES2024+), HTML5, CSS3, Node.js, Python

Full Stack: React, Next.js, Django, Node.js, REST APIs, GraphQL, TypeScript

Frameworks & UI: React, Next.js, Django, Redux Toolkit, Tailwind CSS, Radix UI

Testing & Quality: Playwright, Vitest, Jest, React Testing Library, Storybook

Tooling & DevOps: Docker, CI/CD (GitHub Actions), GraphQL, Figma, Power BI

Professional Experience

Pre-launch US consumer fintech

Brazil (Remote)

Senior Frontend Engineer

2026 - now

- Set up the TypeScript monorepo with one Expo and React Native app for iOS, Android, and web, plus a Next.js admin, from the first commit.
- Built the theme tokens, with a CI check that fails when the design spec drifts from the theme. Every pull request is gated on lint, type checks, unit tests, and Playwright end-to-end runs at desktop and mobile viewports.

Kraken

Brazil (Remote)

Contractor - Full Stack Engineer

Nov. 2024 - 2026

- Built a React Native in-app support portal from scratch across 3 mobile apps (Kraken, Kraken Pro, Krak) with tier-aware contact options, VIP escalation, and live queue visibility. Owned end to end: frontend, backend integration, and rollout.
- Cut visual regression test runtime from 12 min to under a minute by building Playwright VRT infrastructure from scratch. Coverage tripled across the component library.
- Built the Figma-to-code design token pipeline powering theming across multiple brands (light/dark variants). Teams went from days of manual work per brand to automated updates.
- Built 15+ financial data tables and fixed 25+ accessibility issues: keyboard navigation, focus management, and ARIA attributes.
- Set up Segment event tracking across web and 3 React Native apps. Used the data to measure feature adoption and retention across the platform.

Norsk Gjenvinning

Norway (Remote)

Lead Software Engineer & Tech Lead

Sep. 2023 - Sep. 2024

- Built 5 storefronts end to end with React, TypeScript, and Next.js. Worked directly with the CEO, product, design, and business stakeholders from requirements to deployment.
- Built a shared component library used by 3 product teams. Feature cycle time dropped by roughly 25%.
- Managed 5 engineers across 2 time zones. Set up the sprint cadence, code review process, and CI/CD pipeline from scratch.

Lead Full Stack Engineer — Sep. 2022 - Aug. 2023

- Integrated 5 storefronts with Sanity CMS and the internal design system. The content team could now manage brand-aligned pages without engineering help.
- Got Core Web Vitals into the green on key checkout routes through code splitting, lazy loading, and edge caching. LCP under 2s.
- Set up Google Analytics and SEO tooling from scratch for Norwegian client properties, including a major Norwegian recycling company.
- Led WCAG 2.0 AA compliance across e-commerce storefronts and brand landing pages for 70+ European companies.

Oda

Norway

Software Engineer — Aug. 2020 - Aug. 2022

- Built the A/B experimentation program from scratch and kept it running at 2 to 4 experiments a month.
- Removed hard-coded configs that were blocking international expansion. Finland and Germany went live without engineering changes.
- Ran Technical Debt workshops every two months to keep the backlog from compounding. Shipping pace held through a 2x headcount growth.

Sportradar

Norway

Full Stack Engineer — Sept. 2018 - Aug. 2020

- Refactored web crawlers and scrapers into 5 independent Node.js microservices. Runtime dropped by 120x and resource usage by 10x. Designed REST APIs for inter-service communication.
- Migrated CI/CD from Jenkins to GitLab with Docker containerization. Deploy failures fell by 85%.

Samsung R&D Center

Campinas, Brazil

Software Engineering Intern — Jan. 2017 - Jan. 2018

- Built a WCAG 2.0 AA Web Accessibility portal and automated internal reporting dashboards with Power BI.
- Contributed to IoT prototype R&D and gave talks on Web Accessibility at 2 industry conferences.

Education

Universidade Federal de Itajuba - UNIFEI

Itabira, Brazil

Bachelor of Science in Computer Engineering — 2011 - 2018

University of Toronto

Toronto, Canada

Exchange Student, Electrical and Computer Engineering — 2013 - 2014
